Summary:

Public health surveillance data indicate decreasing levels of influenza like illness (ILI) in Holmes County. The percentages of ILI outpatient visits and ILI ED visits remain above the state average but decreased from the previous week (Figures 1 and 2). The number of influenza-associated hospitalizations remain below the historical average (Figure 3). Nearly one-half of ILI ED visits have occurred among children less than 5 years of age while most influenza associated hospitalizations have occurred among adults age 65 or older. There were 0 influenza-associated hospitalizations, 0 novel influenza infections, and 0 influenza deaths reported to the Holmes County General Health District during the week.

Age Distribution of ILI Data:

Figure 4. Age Distribution of ILI Outpatient and ED Visits among Holmes County residents, 2019-2020 Flu Season
State, Regional, and National Data:

Ohio Surveillance Data:
- **ODH lab** has reported **285 positive** influenza tests from specimens sent from sentinel ILINet providers and hospital clinical labs. 2019-2020 influenza season results: (116) A/pdmH1N1; (14) A/H3N2; (155) Influenza B; (through 01/18/2020).
- The **National Respiratory and Enteric Virus Surveillance System (NREVSS)** has tested **42,760** influenza specimens by RT-PCR at participating facilities. 2019-2020 influenza season positive results: (130) A/pdmH1N1; (2) A/H3N2; (1821) Flu A Not Subtyped; and (4733) Flu B; (through 01/18/2020)
- **1 influenza-associated pediatric mortality** has been reported during the 2019-2020 season (through 01/18/2020).
- No **novel influenza A virus infections** have been reported during the 2019-2020 season (through 01/18/2020).
- Incidence of confirmed influenza-associated hospitalizations in 2019-2020 season = **3,034** (through 01/18/2020).

HHS Regional Surveillance Data*: During week 2 (January 4th – January 11th, 2020), the proportion of outpatient visits for ILI in Region 5 (Ohio is in Region 5) was 3.00%, which is **above** the regional baseline of 1.9%. Michigan, Ohio, West Virginia, Pennsylvania, Kentucky, and Indiana reported Widespread Activity.

National Surveillance Data*: During week 2 (January 4th – January 11th, 2020), the majority of the U.S. reported High or Moderate influenza activity. The proportion of outpatient visits for ILI was 4.7%, which is **above** the national baseline of 2.4%. All 10 HHS regions reported ILI levels at or above their region-specific baseline level. Nationally influenza B/Victoria viruses have been reported more frequently than other influenza viruses this season. However, during recent weeks, approximately equal numbers of B/Victoria and influenza A(H1N1)pdm09 viruses have been reported nationally. The predominant virus varies by region. The predominant virus also varies by age group. Nationally, influenza B/Victoria viruses are the most commonly reported influenza viruses among children age 0-4 years (47% of reported viruses) and 5-24 years (57% of reported viruses), while A(H1N1)pdm09 viruses are the most commonly reported influenza viruses among persons 25-64 years (46% of reported viruses) and 65 years of age and older (53% of reported viruses).
Data Sources:

1. **Outpatient Influenza Like Illness Visits**: The Holmes County General Health District collects and monitors data on the percentage of outpatient visits seen for influenza like illness. The data collection is part of a national effort to track the occurrence and severity of the influenza season in the United States. Two outpatient providers in Holmes County are voluntarily participating during 2017-2018 influenza season.

2. **Emergency Department Visits**: Local data is based on data reported by Pomerene Hospital. Pomerene collects data on the disease diagnosis of patients presenting at the emergency department. ILI data is based on laboratory confirmed diagnosis of influenza. Aggregate numbers are voluntarily reported to the Holmes County General Health District. Statewide data is gathered by the Epi Center Syndromic Surveillance System and is based on the chief complaint of patients presenting at the ED.

3. **Influenza-Associated Hospitalizations (ODRS)**: Influenza-associated hospitalizations and novel influenza infections are reported by the Holmes County General Health District and hospitals using the Ohio Disease Reporting System (ODRS). Hospitalizations can be used as an indicator of the severity of illness during a particular influenza season. This condition became reportable in January 2009.

4. **Office of Vital Statistics**: The Holmes County General Health District Office of Vital Statistics receives reports on the causes of death that occur within the county. Influenza and pneumonia deaths were included in this report if they were listed as the immediate or underlying cause of death on the death certificate.
