## OVERVIEW:

Coronavirus disease 2019 (COVID-19) is a respiratory illness that can spread from person to person. The virus that causes COVID-19 is a novel coronavirus that was first identified during an investigation into an outbreak in Wuhan, China. The World Health Organization declared COVID-19 a global pandemic on March 11, 2020.

- Public recreation centers and indoor sports facilities.
- Parades, fairs, festivals, and carnivals. Amusement parks, theme parks, outdoor water parks, children's play centers, playgrounds, and funplexes.
- Aquariums, zoos, museums, historical sites, and similar institutions.
- Country clubs and social clubs.
- Spectator sports, recreational sports tournaments and organized recreational sports leagues. Health clubs, fitness centers, workout facilities, gyms, and yoga studios.
- Swimming pools, whether public or private, except swimming pools for single households.
- Residential and day camps.
- Campgrounds, including recreational camps and recreational vehicle (RV) parks. Excludes people living in campground RVs with no other viable place of residence.

- [Camping continued] Excludes people living in cabins, mobile homes, or other fixed structures that are meant for single families and where preexisting residential activity already has been established. (E.g., for people who have part-time preestablished residences at campgrounds for the summer months.)

## Contact Tracing

Contact tracing process if you feel ill:

1. You call your healthcare provider and they may decide to test you for COVID-19 if you are exhibiting the symptoms. While you wait for the test results, you stay home and isolate yourself from others.
2. If you test positive for COVID-19, your healthcare provider will call you to let you know that you tested positive. They will notify the local health department, who will then notify the Ohio Department of Health so that the case is added to the state's data. During this time, you continue to stay home and isolate yourself.
3. Next, a public health worker who is performing contact tracing will reach out to you to voluntarily talk and create a line list that is made up of who you have been in contact with. This traces who you may have come into contact with and may have been exposed to the virus.
4. While you are still home and isolating, the public health worker who is conducting the contact tracing is in contact with those who you may have been around and may have been exposed. Those who have been exposed will self-quarantine and monitor their symptoms for cough, fever, and shortness of breath. If they show no symptoms, after 14 days, their quarantine lifts. If these individuals do begin to show symptoms, they should contact their healthcare provider who may tell them to go and get a test.
